

Date: 4/5

Wednesday Challenge Form

Group Members: Zachary, Paul

Problem Statement: Using a simple formula and a circular object, we Had to find as many Correct digits to π as we could

Approach: Me and my partner chose to use a Water bottle that was on our desk as the object To measure and it worked well since it got us The first few digits of π

Solution: Monte and Armen won because they Didn't use decimals

Lessons Learned: the extra decimal points On a number are not that important
