

Date:

Wednesday Challenge Form

Group Members: Zachary, Paul

Problem Statement: We have to design a boat
On sketch up that we will trade to another team
In exchange for their sketch up which we will build

Approach: My partner and I chose to use a
Simple square for the body of the boat and
To make it out of cardboard with duct tape
So that it could float. The team that we were
Partnered with made a design that used
Styrofoam for the body which allowed it to
Float better

Solution: My team and our partner team won

Lessons Learned: boats move faster with a sail
