

Date: 5/3

## Wednesday Challenge Form

Group Members: Zachary, Andrew

**Problem Statement:** We had to write the instructions to build a plane on a separate piece of paper that we would give to another group. The winning team is whoever could go furthest.

**Approach:** Like 90% of the class we chose to go online and find the directions for how to make the plane. We then had to write down the directions on some paper and give it to a team that was partnered with us.

**Solution:** Our airplane didn't go very far and the furthest thrown object was a paper ball.

**Lessons Learned:** Throwing a paper airplane in different directions with different amounts of power will change the outcome of where it lands.
